

## **7notes with Su-Pen Wins “Mobile Platform Solutions” Category In Mobile Project Awards**

*MetaMoJi Corporation is proud to announce that its popular note-taking app “7notes”, and its original stylus pen “Su-Pen”, have been selected as a winner at the Mobile Project Awards in the “Mobile Platform Solutions” category.*

Tokyo ([PRWEB](#)) June 20, 2012 -- MetaMoJi Corporation is proud to announce that its popular note-taking app “7notes”, and its original stylus pen “Su-Pen”, have been selected as a winner at the Mobile Project Awards in the “Mobile Platform Solutions” category.

The Mobile Project Awards were established to give recognition to organizations and projects that progress the growth of mobile business within Japan. The judges selected 7notes and Su-Pen due to their innovative features, contribution to the mobile market, outstanding usability, and effectiveness in a note taking environment.

With its state-of-the-art handwriting recognition engine, 7notes provides users with a superior note taking experience, removing the reliance on the software keyboard. Common scenarios include taking notes during a telephone call, while attending lectures, when meeting with customers, and while commuting. 7notes allows users to easily export notes to e-mail, Facebook, and Twitter. Evernote users can take advantage of the 7notes enhancement (for iOS devices) to directly integrate with Evernote notebooks, unlocking the power of handwriting for new and existing notes. Android users not only benefit from 7notes’ exceptional predictive text engine, but also the integration of the Mazec technology into the operating system. The Mazec is an optional input window that appears when text is required, and allows the user to switch into handwriting recognition mode as well as using a software keyboard. As Mazec is installed system wide, users can handwrite emails, fill out forms on web-pages, and access handwriting recognition within any other installed application.

7notes is available for the iPhone and iPad, Android, and Kindle Fire devices via the Apple App Store, Google Play, the Samsung Apps market-place and Amazon.

Su-Pen is an original stylus pen, developed by MetaMoJi. Su-Pen was thoughtfully designed and developed by the 7notes developers and feedback from customers. The pen is currently available within Japan, with a launch into North America and EMEA imminent.

Su-Pen has the following features:

- The pen tip is made of special fibers with sensitive electrical conductivity. These provide amazing durability and a high-quality user experience.
- Stainless-steel pen holders that are carefully polished by master craftsmen in a region famed within Japan for the quality of manufactured metal goods.
- The pen tip can be exchanged into other pen holders quickly and easily
